

David Emanuel Espinoza Romero

Frontend Developer

Experience

Frontend Developer Vinary Technology | Ambato, Ec | 2021 - 2022

Creation of Administrative Management System for educational institutions. (html, scss, ts, angular, ngxComponents, Bootstrap)

- Improved application security by implementing authorization/authentication, with guards and jwt.
- The project had no structure, Improvement in the structure of the project based on modules (Global/Local).
- Code refactoring (Modules, Pipes, Directives, Services, Components), so that they are reusable throughout the project.

Web Developer Independiente | Ambato, Ecuador | 2020 - 2022

Creation of web pages, web sites, landing pages, etc. (html, css, js)

Personal Project

WhatsAppWeb Bot | (Nest.js, Postgres), (Angular, Bootstrap, Unit Testing), GitHub

I'm building an admin to configure app settings like replies to messages, hours, categories, linking a mobile number and in the process of adding more.

Creation of the API for information management, authentication/authorization, connection with whatsapp, BOT for automatic responses, etc.

I am currently learning unit tests with Jest and Testing-Library (TDD) Test Drive Development to improve code quality.
